

## PENDING CLAIMS

1. (Original) An organic electroluminescent ("EL") device comprising :  
an anode; a cathode; and at least one layer located between the anode and the cathode, wherein the at least one layer comprises a light-emitting layer and a double-spiro compound of the Chemical Formula I:

### Chemical Formula I,

wherein R1 through R24 are substituent groups, identical or different, and wherein not all of R1 through R24 are hydrogen.

2. (Original) The organic EL device of Claim 1, wherein the light-emitting layer comprises the double-spiro compound having a band gap corresponding to visible light emission.
  3. (Original) The organic EL device of Claim 2, wherein the band-gap for the visible light emission is from about 1.8 eV to about 3.5 eV.
  4. (Original) The organic EL device of Claim 1, wherein the light-emitting layer comprises a fluorescent or phosphorescent material.

5. (Original) The organic EL device of Claim 1, further comprising a substrate, wherein the substrate contacts either the anode or the cathode.

6. (Original) The organic EL device of Claim 1, wherein the at least one layer comprises the double-spiro compound having one or more properties selected from the group consisting of electron injection, electron transportation, light emission, hole transportation, and hole injection.

7. (Original) The organic EL device of Claim 1, wherein the light-emitting layer comprises at least one compound selected from the group consisting of Chemical Compounds 100-137, 200-222, and 400-413 as shown below:

8. (Original) The organic EL device of Claim 7, wherein the light-emitting layer further comprises a non-double-spiro light-emitting compound.

9. (Original) The organic EL device of Claim 8, wherein the non-double-spiro light-emitting compound has a band gap smaller than a band gap of the double-spiro compound.

10. (Original) The organic EL device of Claim 8, wherein the non-double-spiro light-emitting compound has a band gap greater than a band gap of the double-spiro compound.

11. (Original) The organic EL device of Claim 8, wherein the non-double-spiro light-emitting compound is either fluorescent or phosphorescent compound.

12. (Original) The organic EL device of Claim 1, wherein the at least one layer comprises at least one of an electron-injecting and an electron-transporting layer.

13. (Original) The organic EL device of Claim 12, wherein the at least one of the electron-injecting and electron-transporting layers comprises at least one compound selected from the group consisting of Chemical Compounds 200-222 as shown below:

14. (Original) The organic EL device of Claim 1, wherein the at least one layer comprises at least one of a hole-injecting layer and a hole-transporting layer.

15. (Original) The organic EL device of Claim 14, wherein the at least one of the hole-injecting and hole-transporting layers comprises at least one compound selected from the group consisting of Chemical Compounds 300- 308 and 400-413 as shown below:

16. (Original) An electronic device comprising a display, wherein the display comprises the organic EL device of Claim 1.

17. (Original) A method of generating visible light from an organic EL device of Claim 1, comprising:

applying electric power between the anode and cathode of the organic EL device of Claim 1;

the cathode injecting electrons toward the light-emitting layer;

the anode injecting holes toward the light-emitting layer; and

allowing recombination of at least part of the injected electrons and holes in the light-emitting layer, thereby generating visible light from the light-emitting layer.

18. (Original) The method of Claim 17, wherein the light-emitting layer comprises the double-spiro compound having a light-emitting property.

19. (Original) The method of Claim 18, wherein the light-emitting layer further comprises a non-double-spiro light-emitting compound.

20. (Original) The method of Claim 17, wherein the at least one layer comprises the double-spiro compound having one or more properties selected from the group consisting of visible light emission, electron transportation, electron injection, hole transportation, and hole injection.

21. (Original) A method of manufacturing the organic EL device of Claim 1, the method comprising:

forming a first conductive layer;

depositing a material comprising the double-spiro compound of the Chemical Formula I on a first conductive layer so as to form at least one layer comprising the light-emitting layer; and

forming a second conductive layer on the material, wherein either of the first and second conductive layers corresponds to the anode or cathode.

22. (Original) The method of Claim 21, wherein the formation of the light-emitting layer comprises depositing the double-spiro compound having a light-emitting property.

23. (Original) The method of Claim 22, wherein the formation of the light-emitting layer comprises co-depositing a non-double-spiro light-emitting compound.

24. (Original) The method of Claim 21, wherein the formation of the at least one layer comprises forming layers having one or more functions selected from the group consisting of visible light emission, electron transportation, electron injection, hole transportation, and hole injection.

25. (Original) The method of Claim 24, wherein the formation of the layers having one or more functions comprises depositing a double-spiro compound.

26. (Original) The method of Claim 24, wherein the formation of the layers having one or more functions comprises depositing a non-double-spiro compound.
